

TECHNICAL DATA SHEET

EVODRAIN HARD R2 HDPE SN8

DN/OD series R2 type drainage pipe
with corrugated external and smooth internal surface

According to DIN 4262-1
Pipe profile type: R2
Perforation classes:
TP(360°); LP(180°±10°);
MP(≤120°); UP

PRODUCT DESCRIPTION

Drainage pipe with corrugated external wall and smooth internal surface according to product standard DIN 4262-1 conforms to profile type R2 and perforation classes TP (360° fully perforated drainage pipe), LP (180°±10° locally perforated pipe), MP (≤120° multipurpose pipe) and UP (unperforated liquid transport pipe). Water filtration inlet perforation opening area ≥50 cm²/m (for perforated pipes). Pipes are available in bars with a pipe length of 6 m. Every bar is supplied with a double sleeve. Standard set for LP, MP and UP perforation class pipes includes a double sleeve and a sealing ring (which conforms to EN 681-1/A3 standard requirements). The supplied sealing ring grants a hermetic seal with a pressure rating of <0,5 bar (for coupling area). LP and MP perforation class pipes are marked with a permanent yellow double-lining on the outside surface, for easier identification of perforation area. DN/OD drainage pipes are available with a nominal ring stiffness class of SN8:

Pipe outer surface color is black (RAL 9004) but internal surface is white, UP perforation class pipe has a blue internal surface color.

Pipe material: HDPE (high density polyethylene).

Sealing ring material: EPDM (ethylene-propylene-diene rubber (terpolymer)). On request available a NBR (acrylonitrile-butadiene rubber) sealing ring.

Pipe produced according to standard: DIN 4262-1

Sealing rings conform to standard: EN 681-1/A3

APPLICATION AREA

Corrugated drainage pipes are best suited for establishing hidden horizontal drainages to ensure dehumidification of the landfills. Drainage is to be installed on the land where ground-water depth is less than dehumidification norm, i.e. where high humidity saturation in the ground may result in slower drying of the productive soil at spring, as well as in destruction of basements of the building, road elution, etc. EVODRAIN HARD R2 type SN8 class drainage pipes are applicable for areas:

- In agriculture, forestry, in parks, squares and peat fields;
- Stadiums and sport complexes;
- Temporary and permanent drainage systems at construction sites;
- Landfills (liquid and biogas collection);
- For civil and industrial buildings and construction areas;
- Airport territory construction;
- Harbour and dock territory construction;
- Road construction application:
 - Without transport load (pavements, pedestrian and bicycle paths);
 - With transport load (railroad, tunnel and highway construction)

Storage of sealing rings according to standards ISO 2230 and EN 681-1/A3 D.

Installation performance in accordance with standard EN 1610; CEN/TR 1046.

Fully perforated pipe TP(360°)

Locally perforated pipe LP(180°±10°)

Multipurpose pipe MP(≤120°)

Unperforated liquid transport pipe UP

Nominal strength class:
SN8

TECHNICAL DATA SHEET

EVODRAIN HARD R2 HDPE SN8

DN/OD series R2 type drainage pipe
with corrugated external and smooth internal surface

According to DIN 4262-1
Pipe profile type: R2
Perforation classes:
TP(360°); LP(180°±10°);
MP(≤120°); UP

PRODUCT DIMENSIONS

Pipe dimensions						
Nominal size	63	75	90	110	125	160
Inside ID, mm	51,70	62,70	76,20	94,10	106,70	137,60
Profile height (h), mm	5,65	6,15	6,90	7,95	9,15	11,20
Pipe bar length (L), m	6	6	6	6	6	6

Perforation opening parameters for perforation classes- TP, MP un LP						
Perforation angle (α)	60°	60°	60°	60°	60°	60°
Perforation opening width (a), mm	1,20	1,20	1,40	1,20	1,20	1,40
Perforation opening area, cm ² /m	≥50	≥50	≥50	≥50	≥50	≥50

Perforation opening parameters for perforation class TP (360°)

Perforation opening parameters for perforation class MP (≤120°)						
Perforation opening length (b), mm	13,22	13,30	13,20	18,40	20,40	22,50
Perforation opening quantity on transverse plane normal to profile foot, pcs	3	3	3	3	3	3

Fully perforated pipe TP(360°)

Locally perforated pipe LP(180°±10°)

Multipurpose pipe MP(≤120°)

Unperforated liquid transport pipe UP

Nominal strength class:
SN8

TP class 360° fully perforated pipe. Water inlets are evenly distributed along pipes circumference.

LP class 180°±10° locally perforated pipe. Water inlets are located in the upper part of the pipe symmetric to pipes vertical axis in 180°±10° area, but flow line (used for collection and transportation of liquids) is not perforated and stands opposed to inlet area.

MP class ≤120° multipurpose pipe. Water inlets are located in the upper part of the pipe symmetric to pipes vertical axis in max of 120° area, but flow line (used for collection and transportation of liquids) is not perforated and stands opposed to inlet area.

UP class unperforated liquid transport pipe is used for transportation of water.

TECHNICAL DATA SHEET

EVODRAIN HARD R2 HDPE SN8

DN/OD series R2 type drainage pipe
with corrugated external and smooth internal surface

According to DIN 4262-1
Pipe profile type: R2
Perforation classes:

MP(≤120°); UP

PRODUCT PARAMETERS

Pipe physical and mechanical properties

Parameter	Value	Test method
Material	HDPE	DIN 4262-1
Ring stiffness, kN/m ²	8	EN 9969
Resistance to external blows, by applying staircase method: d90, 0.8 ±0.005kg, Hmin 0.8m, t=(±0)°C	H ₅₀ >1,2m	EN 1411

Sealing ring physical and mechanical properties for LP, MP un UP class pipes

WCL type rubber sealing ring

Material	EPDM	ISO 1629
Durability in low temperature, at t= -25°C	72 h	ISO 815
	168 h	ISO 3387
Chemical resistance	pH2<pH<pH12	ISO/TR 7620
Permeability pressure	<0,5 bar	

WG/WCO type rubber sealing ring

Material	NBR	ISO 1629
Oil resistance, Oil No. 1 and Oil No. 3 at t= 70°C	72 h	LVS EN 681-1/A3
Chemical resistance	pH2<pH<pH12	ISO/TR 7620
Permeability pressure	<0,5 bar	

Pipe flushing (cleaning) allowance parameters

Max pressure, bar	120
Minimum flow rate, l/min	80

FILTER MATERIAL APPLICATION OPTIONS

Drainage pipes EVODRAIN HARD R2 are produced without filter material overlay. If it is necessary then application of filter material must be done on site. Recommended application of filter material overlay is demonstrated in the tables below.

Class TP 360° fully perforated pipe recommended filter material overlaying options

A variant	B variant
Pipe is covered fully along it's circumference with a single sheet of filter material overlay	Pipe is covered along it's circumference with two identical sheets of filter material overlays

Class LP 180°±10° locally perforated pipes and class MP ≤120° multipurpose pipe recommended filter material overlaying options

A variant	B variant	C variant
Only perforated area is overlaid with a single filter sheet	Pipe is fully covered along it's circumference with a single filter sheet	Pipe is covered along it's circumference with two identical sheets of filter material overlays

Fully perforated pipe TP(360°)

Locally perforated pipe LP(180°±10°)

Multipurpose pipe MP(≤120°)

Unperforated liquid transport pipe UP

Nominal strength class:
SN8

TECHNICAL DATA SHEET

STANDARDS APPLICABLE TO PIPES

Standard	Description
DIN 4262-1	Pipes and fittings for subsoil drainage of trafficked areas and underground engineering - Part 1: Pipes, fittings and their joints made from PVC-U, PP and PE
EN 13476-3+A1	Plastics piping systems for non-pressure underground drainage and sewerage. Structured-wall piping systems of unplasticized polyvinyl chloride (PVC-U), polypropylene (PP) and polyethylene (PE). Specifications for pipes and fittings with smooth internal and profiled external surface and the system, Type B
Pipe geometric parameters according to:	
EN 3126	Plastic piping systems - Plastic components - Determination of dimensions
Pipe mechanical parameters according to:	
EN ISO 9969	Thermoplastics pipes - Determination of ring stiffness
EN 9967	Thermoplastics pipes - Determination of creep ratio
EN 1411	Plastics piping and ducting systems - Thermoplastics pipes - Determination of resistance to external blows by staircase method

APPLICATION BY SUBSTANCE TYPE

Substance type	Without filter material overlay	With A type filter material overlay*	With coco fiber filter material overlay*
Binding– poorly filtering ground			
Clay	No	No	Yes
Dense sandstone	No	No	Yes
Sandstone	No	Yes	Yes
Non-binding– poorly filtering ground			
Loam	No	Yes	No
Binding–well filtering ground			
Coarse sand	Yes	Yes	No
Binding sand	No	Yes	No
Non-binding sand (loose)	No	Yes	No
Gravel	Yes	Yes	No
Turf	No	Yes	Yes

*- If substance requires a filter material overlay then application of filter overlay must be done on site.

TECHNICAL DATA SHEET

EVODRAIN HARD R2 SN8 and SN16 pipes application for drainage piping systems

ROAD CONSTRUCTION APPLICATION

A. variant

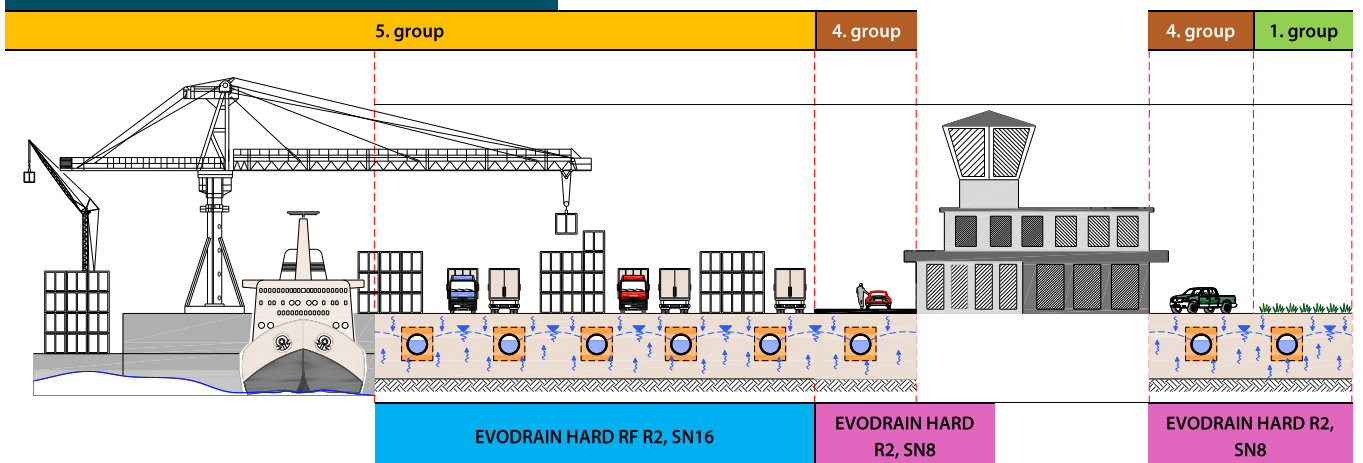

Typical highway cross-section, split into groups according to nominal strength (SN) class application of EVODRAIN HARD pipes.

B. variant

Representative cross section of city street (carriageway) and pavement (sidewalk) or a hard shoulder, split into groups according to nominal strength (SN) class application of EVODRAIN HARD pipes.

1. Group	2. Group	3. Group	4. Group
Areas which can only be used by pedestrians and pedal cyclists.	Pedestrian areas and comparable areas, car parks or car parking decks.	Areas of kerbside channels of roads which, when measured from the kerb edge, extends a maximum of 0.5m into the carriageway and maximum of 0.2m into the pedestrian area.	Carriageways of roads (including pedestrian streets), hard shoulders and parking areas, for all types of road vehicles.

HARBOR AND DOCK APPLICATION

1. Group	4. Group	5. Group
Areas which can only be used by pedestrians and pedal cyclists.	Carriageways of roads (including pedestrian streets), hard shoulders and parking areas, for all types of road vehicles.	Areas imposing high wheel loads, e.g. docks, aircraft pavements.

TECHNICAL DATA SHEET

RAILWAY CONSTRUCTION APPLICATION

Description of used terms

Vw - terrestrial water;
Lw - infiltration water;
Kw - capillary water;
Sw - water layer;
Dw - groundwater, still water

Is 1 - inside traffic load influence area (from 1 track)
Is 2 - inside traffic load influence area (from 2 tracks)
As - outside traffic load influence area
Ss - traffic load influence area
Ais - area outside of traffic load influence

Drainage pipe nominal ring stiffness class (SN) selection by usage area and ground group

Ais	As	Is 1 and Is 2
EVODRAIN HARD R2 type SN8	EVODRAIN HARD R2 type SN8	EVODRAIN HARD RF R2 type SN16
Applicable to all ground groups*	Applicable to all ground groups*	Applicable to G1, G2 and G3 ground groups*

*Ground groups according to ATV-A 127

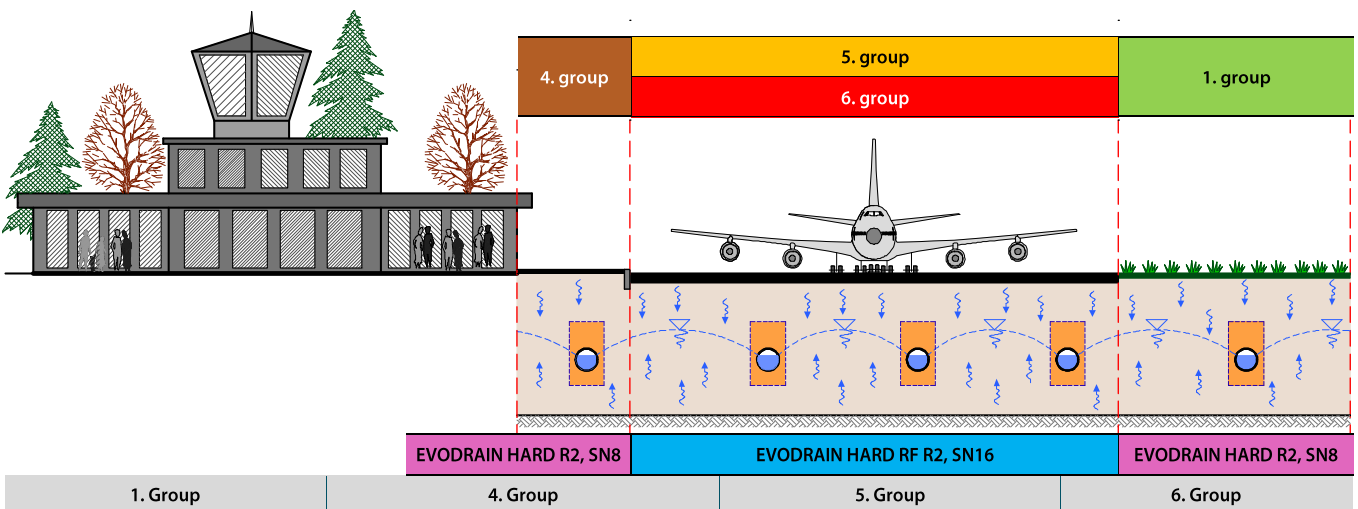

G1 - non-binding sand and gravel

G2 - well binding sand and gravel

G3 - binding mixed ground and coarse sand

G4 - binding ground (e.g. clay)

AIRPORT TERRITORY APPLICATION

1. Group	4. Group	5. Group	6. Group
Areas which can only be used by pedestrians and pedal cyclists.	Carriageways of roads (including pedestrian streets), hard shoulders and parking areas, for all types of road vehicles.	Areas imposing high wheel loads, e.g. docks, aircraft pavements.	Areas imposing particularly high wheel loads, e.g. aircraft pavements.
